Operation Guide of SAMScan

A. For Staff LAN PC

SAMScan for Staff LAN PC is to be used on PCs that are registered under the CityU domain CITYUMD.

A. Step 1 - Installation of SAMScan

By clicking the given link, SAMScan will be installed into the PC, and the program will be run automatically.

Once SAMScan is successfully installed on the PC, it can also be run manually at any time by selecting **Start -> All Programs -> SAMScan -> SAMScan** from the task bar.

However, future installation has to be carried out when there is an updated version of SAMScan. The installation procedure is the same as above.

A. Step 2 - Run SAMScan

A.2.1 A dialog box will be shown.

SAMScan (For I	C with Internet Come	ection)		00

B. For Other Networked PC

SAMScan for Other Networked PC is to be used on PCs that are connected to the campus network but NOT registered under the CityU domain CITYUMD.

B. Step 1 - Installation of SAMScan

- B.1.1 Download the SAMScan installation program by clicking the given link. Click **Save** to save the program to the PC.
- B.1.2 If SAMScan version 3.10 or below has been installed in the PC before, uninstall it using **Control Panel** -> **Add or Remove Programs** before installing the latest version of SAMScan.
- B.1.3 Start installation by running the program from the PC.

B.1.4 Once installation is started, a dialog box will be shown if the PC has already installed SAMScan version 4.0 or above. Click Install SAMScan (Network) to start installation. Click Remove SAMScan (Network) if you want to remove the installed program. Click Finish to proceed.

- B.1.5 Follow the instructions to continue installation.
- B.1.6 During the installation process, a dialog box may appear if other applications are running. Close applications and click **Try Again** button, or click **Continue** button to continue the installation.

Appendix : Software Category Types

Software detected and reported by SAMScan are identified into 9 categories. The following table briefly describes each category type and the expected user actions.

	Category	Description	User Actions (*)
1	Site license	It refers to the software license acquired centrally for use in the University. Such license information is maintained by CSC. In most cases, the license covers all PCs in the University. However, there may be licenses with restricted usage, e.g. used for teaching only. In the latter case, the restrictions will be stated clearly in the Remarks column in the SAMScan report.	User should read the Remarks column carefully. For software that has restricted usage, user should check if he/she complies with it. If not, take appropriate action to acquire license or to remove it immediately.
2	Dept license	It refers to the software license acquired by the department. Such license information is maintained by the departmental administrators. Whether the license covers all PCs or designated PCs, departmental administrators will state clearly the conditions under the Remarks column.	User should read the Remarks column and check if he/she complies with the condition. If not, take appropriate action to acquire license or to remove it immediately.
3	Personal license	It refers to the software license acquired personally by a user. Such license information is maintained by the individual user.	User can optionally enter special remarks for communicating with the departmental administrator.

4	Need license	Use of these software need licenses. However, SAMScan detects that they are not covered by Site license nor Department license	User should acquire appropriate license, or remove the software immediately.
5	Shareware	These are software put up for user evaluation or trial whose usage is subject to terms and conditions as laid down by the copyright owners.	User should check if he/she is observing the terms and conditions. If not, take appropriate action to acquire license or to remove it immediately.
6	Freeware	These are software that are free to use.	No action is required. Users can continue to use the software.
7	Bundled	These software are usually	As long as the users have the
	with	bundled with hardware.	hardware, they can continue to use
	hardware		the software.
