# CREATE! – AI Computer for running Stable Diffusion
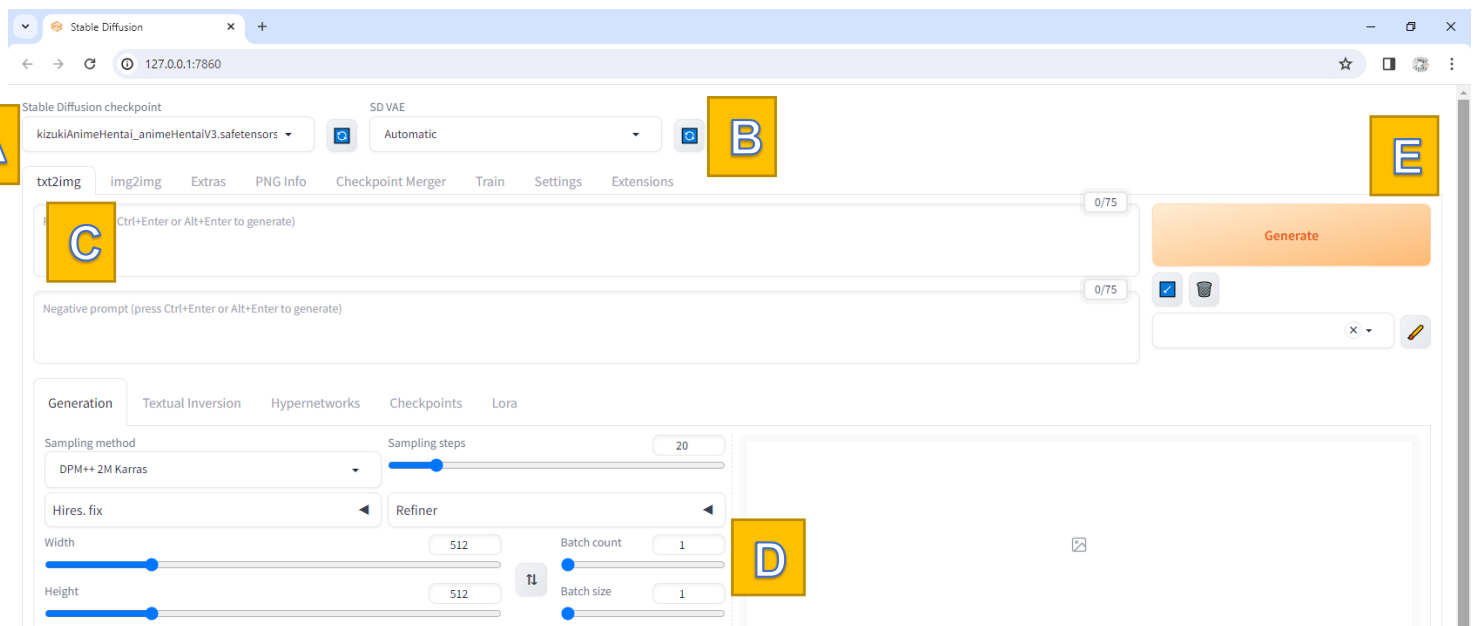

Introduction

Stable Diffusion is a generative artificial intelligence (generative AI) model that produces unique photorealistic images from text and image prompts.

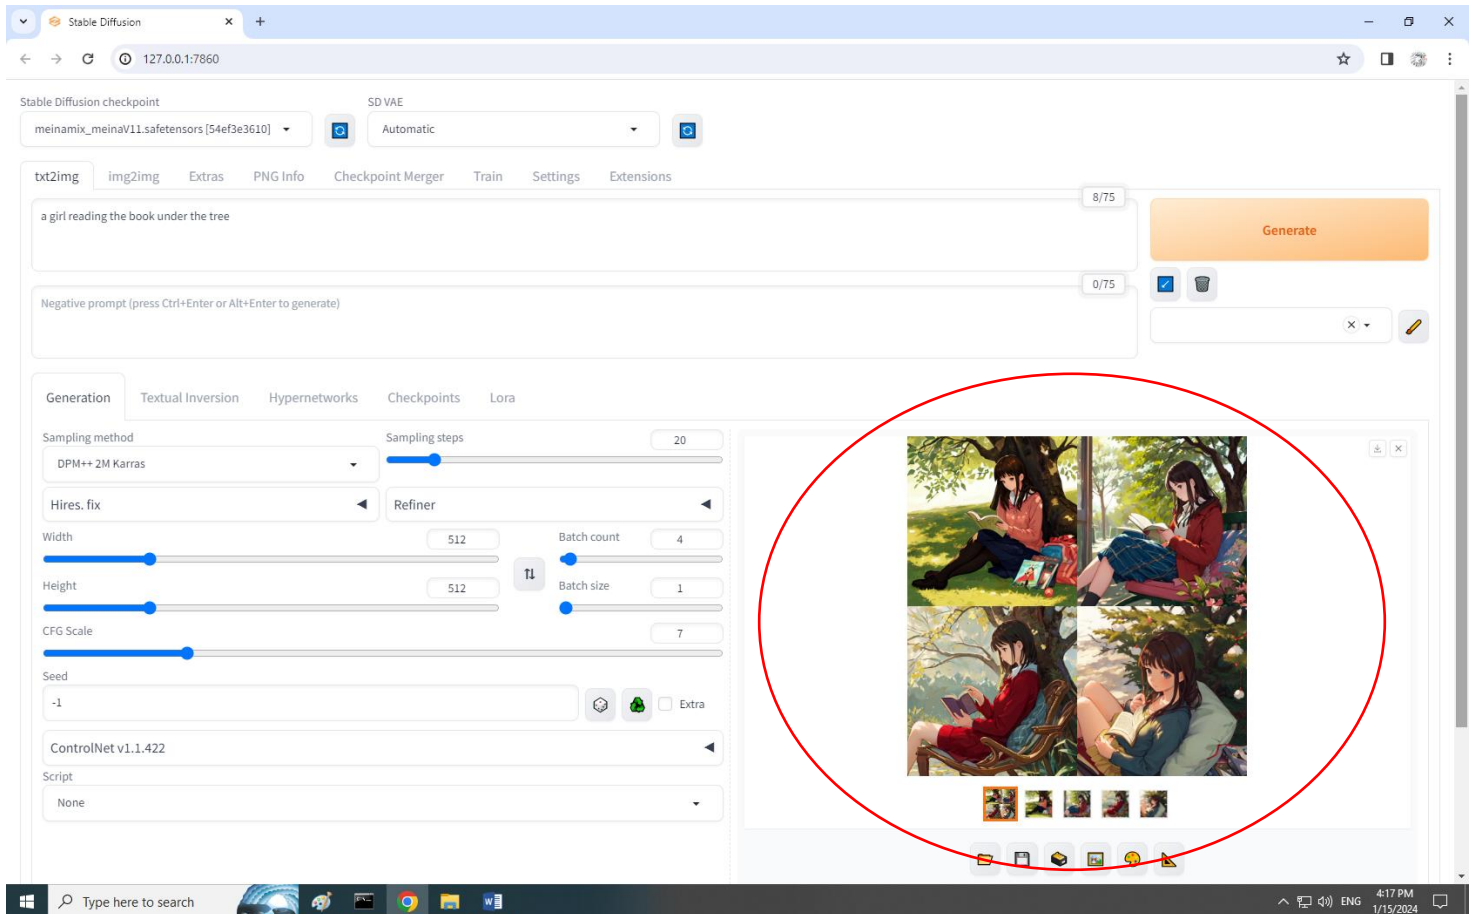

Step 1:
Click the Stable Diffusion icon on the desktop.

Step 2:
It will launch the Browser automatically and show the user interface of Stable Diffusion program.

A: Choose a checkpoint model from the dropdown menu.
B: Select SD VAE if required.
C: Enter the prompt in the text box, for example, "a girl reading the book under the tree."
D: Specify the number of images to be generated.
E: Click on "Generate" to obtain the final result.

CREATE! – AI Computer for running Stable Diffusion

Step 3: You can save the generated images to your USB drive.

Notes:

- You can download different model at https://civitai.com/models, save the model file to the path: "C:\AI_Start\stable-diffusion-webui\models\Stable-diffusion" for generating different style AI image.
