

**City University of Hong Kong  
Course Syllabus**

**offered by  
Department of Mechanical Engineering  
with effect from Semester A 2022 / 23**

---

---

**Part I Course Overview**

**Course Title:** Fundamentals of Nuclear Engineering

---

**Course Code:** MNE8114

---

**Course Duration:** 1 semester

---

**Credit Units:** 3 credits

---

**Level:** R8

---

**Medium of Instruction:** English

---

**Medium of Assessment:** English

---

**Prerequisites:** Nil  
*(Course Code and Title)*

---

**Precursors:** Nil  
*(Course Code and Title)*

---

**Equivalent Courses:** Nil  
*(Course Code and Title)*

---

**Exclusive Courses:** Nil  
*(Course Code and Title)*

---

## Part II Course Details

### 1. Abstract

Nuclear engineering is an extremely broad field, covering several professional aspects. The one-semester course of “fundamental of nuclear engineering” is aim to equip research students:

- With the knowledges of atomic and nuclear physics, interaction of radiation with matter, principles of fission reactors, nuclear reactor theory, and the development of advanced nuclear energy systems.
- With the ability to identify the neutron transport theory, diffusion theory, criticality calculations, reactor kinetics, neutron slowing down theory and numerical solution to the diffusion equation.

### 2. Course Intended Learning Outcomes (CILOs)

(CILOs state what the student is expected to be able to do at the end of the course according to a given standard of performance.)

| No. | CILOs   | Weighting*<br>(if applicable) | Discovery-enriched curriculum related learning outcomes (please tick where appropriate) |    |    |
|-----|---|-------------------------------|---|----|----|
|     |   |                               | A1  | A2 | A3 |
| 1.  | <b>Learn</b> the nuclear physics and interaction of radiation particles with matter.  | 20                            |   | ✓  |    |
| 2.  | <b>Describe</b> the principles of fission nuclear reactors and different types of nuclear power plants.   | 10                            | ✓   |    |    |
| 3.  | <b>Identify</b> how the complex neutron transport and slowing-down processes can be described by simple analytical models.                      | 30                            |   | ✓  |    |
| 4   | <b>Demonstrate</b> the basic nuclear reactor theory, including one-group reactor equation, multi-group calculations and heterogeneous reactors. | 30                            |   | ✓  |    |
| 5   | <b>Study</b> the conceptual design of Generation-IV (Gen-IV) reactors and D-T fusion reactors.  | 10                            | ✓   |    |    |
|     |   | 100%                          |   |    |    |

\* If weighting is assigned to CILOs, they should add up to 100%.

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to self-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

### 3. Teaching and Learning Activities (TLAs)

(TLAs designed to facilitate students' achievement of the CILOs.)

| TLA                   | Brief Description   | CILO No. |   |   |   |   | Hours/week<br>(if applicable) |
|-----------------------|---|----------|---|---|---|---|-------------------------------|
|                       |   | 1        | 2 | 3 | 4 | 5 |                               |
| Lecture               | Explain key concepts, principles, theories, and their applications in fundamentals of nuclear physics, nuclear reactors and nuclear power plants, neutron transport and slowing-down processes, and the basic nuclear reactor theory. | ✓        | ✓ | ✓ | ✓ | ✓ |                               |
| Tutorial              | Homework, in class quiz review.   | ✓        | ✓ | ✓ | ✓ | ✓ |                               |
| Self-study Activities | Pre-reading course materials, doing assignments.  | ✓        | ✓ | ✓ | ✓ | ✓ |                               |
| Mini-project          | Choose one of Generation-IV (Gen-IV) reactors or D-T fusion reactor, study, review, discussion and presentation.  | ✓        | ✓ | ✓ | ✓ | ✓ |                               |

### 4. Assessment Tasks/Activities (ATs)

(ATs are designed to assess how well the students achieve the CILOs.)

| Assessment Tasks/Activities           | CILO No. |   |   |   |   | Weighting* | Remarks                                       |
|---------------------------------------|----------|---|---|---|---|------------|---|
|                                       | 1        | 2 | 3 | 4 | 5 |            |   |
| Continuous Assessment: 50 %           |          |   |   |   |   |            |   |
| Homework                              | ✓        | ✓ | ✓ | ✓ | ✓ | 20%        | For every lecture, total 11                   |
| Mini-project                          | ✓        | ✓ | ✓ | ✓ | ✓ | 10%        | Report submission and presentation to be made |
| Quiz                                  | ✓        | ✓ | ✓ | ✓ | ✓ | 20%        | Taken during every lecture, total 11 times    |
| Examination: 50 % (duration: 2 hours) |          |   |   |   |   |            |   |
| Examination                           | ✓        | ✓ | ✓ | ✓ | ✓ |            |   |
|                                       |          |   |   |   |   | 100%       |   |

\* The weightings should add up to 100%.

**For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.**

## 5. Assessment Rubrics

(Grading of student achievements is based on student performance in assessment tasks/activities with the following rubrics.)

Applicable to students admitted in Semester A 2022/23 and thereafter

| Assessment Task               | Criterion  | Excellent<br>(A+, A, A-) | Good<br>(B+, B) | Marginal<br>(B-, C+, C) | Failure<br>(F)                    |
|-------------------------------|--|--------------------------|-----------------|-------------------------|-----------------------------------|
| 1. Homework                   | Capacity to practice the problems related to the key concepts, principles, and theories after the lectures.  | High                     | Significant     | Moderate                | Not even reaching marginal levels |
| 2. Mini-project               | Ability to explain in detail for the design of advanced nuclear energy system.   | High                     | Significant     | Moderate                | Not even reaching marginal levels |
| 3. Quiz and class performance | Capacity to understand the basic concepts and the important theories and principles during the lectures.   | High                     | Significant     | Moderate                | Not even reaching marginal levels |
| 4. Examination                | Capacity to understand the key concepts, principles, theories, and their applications in fundamentals of nuclear physics, nuclear reactors and nuclear power plants, neutron transport and slowing-down processes, and the basic nuclear reactor theory. | High                     | Significant     | Moderate                | Not even reaching marginal levels |

Applicable to students admitted before Semester A 2022/23

| Assessment Task               | Criterion  | Excellent<br>(A+, A, A-) | Good<br>(B+, B, B-) | Fair<br>(C+, C, C-) | Marginal<br>(D) | Failure<br>(F)                    |
|-------------------------------|--|--------------------------|---------------------|---------------------|-----------------|-----------------------------------|
| 1. Homework                   | Capacity to practice the problems related to the key concepts, principles, and theories after the lectures.  | High                     | Significant         | Moderate            | Basic           | Not even reaching marginal levels |
| 2. Mini-project               | Ability to explain in detail for the design of advanced nuclear energy system.   | High                     | Significant         | Moderate            | Basic           | Not even reaching marginal levels |
| 3. Quiz and class performance | Capacity to understand the basic concepts and the important theories and principles during the lectures.   | High                     | Significant         | Moderate            | Basic           | Not even reaching marginal levels |
| 4. Examination                | Capacity to understand the key concepts, principles, theories, and their applications in fundamentals of nuclear physics, nuclear reactors and nuclear power plants, neutron transport and slowing-down processes, and the basic nuclear reactor theory. | High                     | Significant         | Moderate            | Basic           | Not even reaching marginal levels |

**Part III Other Information** (more details can be provided separately in the teaching plan)

**1. Keyword Syllabus**

*(An indication of the key topics of the course.)*

- Nuclear Fission/Nuclear Fusion
- Nuclear Reactions
- Distribution of Nuclides
- Neutron Reactions and Characteristics
- Scattering of Neutrons
- Nuclear Fission
- Chain Reaction
- Neutron Flux and Cross-section
- Criticality
- Neutron moderators
- Moderators and reactor design
- Delayed neutrons and controllability
- Effects of temperature and voiding on core reactivity
- Reactor poisons
- Transport Equation and Diffusion Equation
- Interaction of fast neutrons with matter

**2. Reading List**

**2.1 Compulsory Readings**

*(Compulsory readings can include books, book chapters, or journal/magazine articles. There are also collections of e-books, e-journals available from the CityU Library.)*

|    |   |
|----|---|
| 1. | J.R. Lamarsh and A.J. Baratta, "Introduction to Nuclear Engineering", Prentice Hall, ISBN: 0-201-82498-1. |
|----|---|

**2.2 Additional Readings**

*(Additional references for students to learn to expand their knowledge about the subject.)*

|    |  |
|----|--|
| 1. | George Bell and Samuel Glasstone, "Nuclear Reactor Theory", Robert E. Krieger Publishing, ISBN: 0-882-75790-3. |
|----|--|
