

**City University of Hong Kong
Course Syllabus**

**offered by Department of Physics
with effect from Semester B 2022/23**

Part I Course Overview

Course Title:	Introduction to Quantum Optics
Course Code:	PHY8255
Course Duration:	One semester
Credit Units:	3 credits
Level:	R8
Medium of Instruction:	English
Medium of Assessment:	English
Prerequisites: <i>(Course Code and Title)</i>	(1) PHY3205 Electrodynamics or equivalent AND (2) PHY3251 Quantum Mechanics or equivalent
Precursors: <i>(Course Code and Title)</i>	Nil
Equivalent Courses: <i>(Course Code and Title)</i>	Nil
Exclusive Courses: <i>(Course Code and Title)</i>	PHY6255 Introduction to Quantum Optics

Part II Course Details

1. Abstract

This is a graduate course on quantum optics, aiming to equipping students with advanced knowledge of quantum aspects of light and light-matter interactions that are necessary to conduct research and to understand literatures. The course will start with classical theory of electromagnetic fields and make a transition to quantum theory. It then discusses classical and quantum description of optical systems and introduces two basic techniques for quantum measurement of light. Second half deals with interaction between optical fields and between light and matters. It will cover nonlinear optical interactions for the generation of quantum states of light, the semiclassical and quantum theories of atom-field interaction, open quantum systems. Afterward students will learn about Casimir effect, Purcell effect, polaritons, and other advanced applications.

2. Course Intended Learning Outcomes (CILOs)

No.	CILOs	Weighting* (if applicable)	Discovery-enriched curriculum related learning outcomes (please tick where appropriate)		
			A1	A2	A3
1.	Recognizing and use appropriately important technical terms and definitions in quantum descriptions of light fields and in interaction between light and matters		✓	✓	
2.	Use appropriate mathematical notations and apply in concise form the laws of quantum optics to understand modern physics problems		✓	✓	
3.	Understand measurement techniques of quantum optics and apply them to the study of modern physics problems		✓	✓	
4.	Solve real and hypothetical problems in quantum physics and optics by identifying the underlying physics and analysing the problems		✓	✓	✓
		100%			

* If weighting is assigned to CILOs, they should add up to 100%.

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to self-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

3. Teaching and Learning Activities (TLAs)

TLA	Brief Description	CILO No.						Hours/week (if applicable)
		1	2	3	4			
Lectures/Student Centred Activities	Explain key concepts, build mathematic foundation and analytical skills, provide examples and solutions of advanced problems in quantum optics	✓	✓	✓	✓			3 hours/week

4. Assessment Tasks/Activities (ATs)

Assessment Tasks/Activities	CILO No.						Weighting*	Remarks
	1	2	3	4				
Continuous Assessment: 60%								
Assignments	✓	✓	✓	✓			30%	
Test	✓	✓	✓	✓			30%	
Examination: 40% (duration: 2 hours)								
							100%	

* The weightings should add up to 100%.

5. Assessment Rubrics

Applicable to students admitted in Semester A 2022/23 and thereafter

Assessment Task	Criterion	Excellent (A+, A, A-)	Good (B+, B)	Marginal (B-, C+, C)	Failure (F)
1. Assignment	Capable to show a good understanding of the taught materials from solving the given problems.	high	significant	moderate	Not given enough efforts or unable to grasp the basic concept.
2. Test	Ability to solve common quantum optics problems.	high	significant	moderate	Not given enough efforts or unable to grasp the basic concept.
3. Examination	Ability to grasp the concept of the taught materials and to solve common quantum optics problems.	high	significant	moderate	Not given enough efforts or unable to grasp the basic concept.

Applicable to students admitted before Semester A 2022/23

Assessment Task	Criterion	Excellent (A+, A, A-)	Good (B+, B, B-)	Fair (C+, C, C-)	Marginal (D)	Failure (F)
1. Assignment	Capable to show a good understanding of the taught materials from solving the given problems.	high	significant	moderate	basic	Not given enough efforts or unable to grasp the basic concept.
2. Test	Ability to solve common quantum optics problems.	high	significant	moderate	basic	Not given enough efforts or unable to grasp the basic concept.
3. Examination	Ability to grasp the concept of the taught materials and to solve common quantum optics problems.	high	significant	moderate	basic	Not given enough efforts or unable to grasp the basic concept.

Part III Other Information

1. Keyword Syllabus

- 1.1 Classical wave description of optical fields
- 1.2 Maxwell equations for electromagnetic fields – first quantization
- 1.3 Second quantization for quantum theory of light
- 1.4 Quantum states for optical fields – squeezed states, entangled states, and more
Glauber-Sudarshan P-representation
- 1.5 Photon counting for discrete variables – multi-photon interference
- 1.6 Homodyne detection for continuous variables – quantum noise
- 1.7 Nonlinear interaction for generation of quantum states
- 1.8 Atom-light interaction, Gauge invariance
- 1.9 Liouville equation for density matrix
- 1.10 Canonical transformation
- 1.11 Open quantum systems
- 1.12 Macroscopic quantum phenomena

2. Reading List

2.1 Compulsory Readings

2.2 Additional Readings

1.	Zheyu Jeff Ou, <i>Quantum Optics for Experimentalists</i> , 1 st Edition (WSPC, 2017)
2.	R. Loudon, <i>Quantum Theory of Light</i> , 3 rd Edition (Oxford University Press, 2000)
3.	Marlan O. Scully & M. Suhail Zubairy, <i>Quantum Optics</i> , 1 st Edition (Cambridge University Press, 1997)
4.	D. F. Walls & Gerard J. Milburn, <i>Quantum Optics</i> , 2 nd Edition (Springer, 2007)
5.	Heinz P. Breuer & Francesco Petruccione, <i>The Theory of Open Quantum Systems</i> (Oxford University Press, 2007)
6.	Girish S. Agarwal, <i>Quantum Optics</i> , 1 st Edition (Cambridge University Press, 2012)
7.	William H. Louisell, <i>Quantum Statistical Properties of Radiation</i> (Wiley-VCH, 1990)
