City University of Hong Kong Course Syllabus

offered by Department of Mechanical Engineering with effect from Semester A 2024/25

Part I Course Overview

Course Title:	Mechanical Behaviour of Materials: From Metallic to Biomedical/Biological Materials
Course Code:	MNE6110
Course Duration:	1 semester
Credit Units:	3 credits
Level:	<u>P6</u>
Medium of Instruction:	English
Medium of Assessment:	English
Prerequisites : (Course Code and Title)	Nil
Precursors : (Course Code and Title)	Nil
Equivalent Courses : (Course Code and Title)	MNE8105 Mechanical Behaviour of Materials: From Metallic to Biomedical/Biological Materials
Exclusive Courses : <i>(Course Code and Title)</i>	Nil

Part II Course Details

1. Abstract

This course aims to provide a comprehensive treatment of the mechanical behaviour of materials with a balanced mechanics-materials approach, which connects the fundamental mechanisms to the wide range of mechanical properties of different materials under a variety of environments, such as metals, polymers, ceramics, composites, electronic materials, biomedical and biological materials. The unifying thread running throughout is that the nano/microstructure of a material controls its mechanical behaviour. Although this course is designed for the postgraduate students in mechanical, biomedical and materials engineering, it also provides useful knowledge for the practicing engineers involved with mechanical behaviour of materials. This course does not presuppose any extensive knowledge of materials.

2. Course Intended Learning Outcomes (CILOs)

(CILOs state what the student is expected to be able to do at the end of the course according to a given standard of performance.)

No.	CILOs	Weighting	Discov	ery-enr	riched
		(if		lum rel	
		applicable)	learnin	g outco	omes
		/	(please	tick w	here
			approp	riate)	
			Al	A2	A3
1.	Be able to describe and correlate the structure and			✓	
	mechanical properties of soft and hard materials in				
	conventional and bio-medical applications.				
2.	Be able to describe the key physical principles and		\checkmark		
	microscopic mechanisms behind the mechanical behavior				
	of soft/hard materials in line with their applications in				
	mechanical and bio-medical engineering.				
3.	Be able to assess the effect of environments on the				\checkmark
	mechanical properties and performance of soft/hard				
	materials which will be commonly used for mechanical and				
	bio-medical engineering.				
4.	Be able to solve or suggest a solution to a problem related			\checkmark	✓
	to the mechanical behavior of soft/hard materials that are				
	key to mechanical and biomedical engineering.				
		N.A.			

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

3. Learning and Teaching Activities (LTAs)

(LTAs designed to facilitate students' achievement of the CILOs.)

LTA	Brief Description	CII	LON	Jo.		Hours/wook (if applicable)
		1 2 3 4		4	Hours/week (if applicable)	
Lecture	Explain key concepts and theories	✓	~	~	✓	3 hrs/week
	related to the mechanical					
	behaviour of materials.					
Homework/Examination	Require students to formulate and	\checkmark	\checkmark		\checkmark	N.A.
	solve the scientific problems					
	based on the theories and models					
	discussed during lectures.					
Mid-term Report	Require students to identify one	✓	~	✓	✓	2 hrs/week
	key problem related to the					
	mechanical behaviour of materials					
	through literature survey and					
	provide a feasible solution.					

4. Assessment Tasks/Activities (ATs)

(ATs are designed to assess how well the students achieve the CILOs.)

Assessment Tasks/Activities		LO N	0.		Weighting	Remarks
	1	2	3	4		
Continuous Assessment: 50%						
Mid-term Report	✓	\checkmark	✓	✓	30%	
Homework		\checkmark	✓	✓	20%	
Examination: 50% (duration:	2 hoi	ırs)				
					100%	

For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.

5. Assessment Rubrics

(Grading of student achievements is based on student performance in assessment tasks/activities with the following rubrics.)

Applicable to students admitted before Semester A 2022/23 and in Semester A 2024/25 & thereafter

Assessment Task	Criterion	Excellent	Good	Fair	Marginal	Failure
		(A+, A, A-)	(B+, B, B-)	(C+, C, C-)	(D)	(F)
1. Examination	Ability to formulate and solve problems with accurate methods.	High	Significant	Moderate	Basic	Not even reaching marginal levels
2. Mid-term Report	Capacity for self-directed learning to understand/identify the key mechanisms/problems and Ability to explain the methodology and procedure.		Significant	Moderate	Basic	Not even reaching marginal levels
3. Homework	Ability to formulate and solve problems with accurate methods; Capacity for self-directed learning to understand the key mechanisms related to mechanical behaviour of materials.	_	Significant	Moderate	Basic	Not even reaching marginal levels

Applicable to students admitted from Semester A 2022/23 to Summer Term 2024

Assessment Task	Criterion	Excellent	Good (P + P)	Marginal	Failure
1. Examination	Ability to formulate and solve problems with accurate methods.	(A+, A, A-) High	(B+, B) Significant	(B-, C+, C) Moderate	(F) Not even reaching marginal levels
2. Mid-term Report	Capacity for self-directed learning to understand/identify the key mechanisms/problems and Ability to explain the methodology and procedure.		Significant	Moderate	Not even reaching marginal levels
3. Homework	Ability to formulate and solve problems with accurate methods; Capacity for self-directed learning to understand the key mechanisms related to mechanical behaviour of materials.	-	Significant	Moderate	Not even reaching marginal levels

Part III Other Information (more details can be provided separately in the teaching plan)

1. Keyword Syllabus

(An indication of the key topics of the course.)

- metals, ceramics, polymers, blood vessels, articular cartilage
- plastic deformation of polymers and glasses, criteria for yielding and flow, hardness, plasticity of biological materials
- atomic and electronic point defects, line defects, interfacial and volumetric defects, twinning, grain size strengthening
- theoretical tensile strength, stress concentration, Griffith criterion, linear elastic fracture mechanics, fracture toughness, microscopic mechanisms of fracture
- diffusion creep, dislocation creep, creep in polymers, diffusion-related phenomena in electronic materials, superplasticity
- S-N curves, mean stress effect, fatigue crack propagation, corrosion, radiation damage

2. Reading List

2.1 Compulsory Readings

(Compulsory readings can include books, book chapters, or journal/magazine articles. There are also collections of e-books, e-journals available from the CityU Library.)

1. Marc Meyers and Krishan Chawla, "Mechanical Behavior of Materials", Cambridge University Press, 2009.

2.2 Additional Readings

(Additional references for students to learn to expand their knowledge about the subject.)

1.	F.A. McClintock and A.S. Argon, "Mechanical Behavior of Materials", Addison-Wesley Publishing Company, Inc., 1966.
2.	Y.C. Fung, "Biomechanics: Mechanical Properties of Living Tissues", Springer, 1993.
3	Thomas H. Courtney, "Mechanical Behaviour of Materials", 2 nd Ed., Waveland Press, Inc. 2000.
