

# EE3301: OPTIMIZATION METHODS FOR ENGINEERING

---

## Effective Term

Semester A 2023/24

## Part I Course Overview

### Course Title

Optimization Methods for Engineering

### Subject Code

EE - Electrical Engineering

### Course Number

3301

### Academic Unit

Electrical Engineering (EE)

### College/School

College of Engineering (EG)

### Course Duration

One Semester

### Credit Units

3

### Level

B1, B2, B3, B4 - Bachelor's Degree

### Medium of Instruction

English

### Medium of Assessment

English

### Prerequisites

MA2001 Multi-variable Calculus and Linear Algebra

### Precursors

EE2302 Foundations of Information and Data Engineering  
and  
EE3009 Data Communications and Networking

### Equivalent Courses

Nil

### Exclusive Courses

Nil

## Part II Course Details

### Abstract

The aims of this course are to introduce students the basic concepts and methods in optimization, and to develop their ability to apply optimization techniques to solve problems in the field of information engineering.

### Course Intended Learning Outcomes (CILOs)

CILOs	Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Assert and justify whether or not fundamental rules and statements in the context of graph theory and optimization are true.	x	x	
2	Provide mathematical formulation and solutions of optimization problems for practical problems.	x	x	
3	Apply optimization methodologies to design and resource provisioning of real-life telecommunications networks and computer systems.	x	x	

#### A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

#### A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to self-life problems.

#### A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

### Teaching and Learning Activities (TLAs)

TLAs	Brief Description	CILO No.	Hours/week (if applicable)	
1	Lecture	Key concepts are described and illustrated. Key concepts are worked out based on examples or problems.	1, 2, 3	3 hours

### Assessment Tasks / Activities (ATs)

ATs	CILO No.	Weighting (%)	Remarks
1	Tests (min.: 1)	1, 2, 3	15
2	#Assignments (min.: 3) Group Learning tasks on Canvas/Discussions throughout the semester (28%) and a final Group Learning report (7%)	1, 2, 3	35

### Continuous Assessment (%)

50

**Examination (%)**

50

**Examination Duration (Hours)**

2

**Additional Information for ATs**

Remark:

To pass the course, students are required to achieve at least 30% in course work and 30% in the examination.

# may include homework, , project/mini-projects, online submissions of homework assignments, online discussions, and online self-learning activities.

**Assessment Rubrics (AR)**

**Assessment Task**

Examination

**Criterion**

Achievements in CILOs

**Excellent (A+, A, A-)**

High

**Good (B+, B, B-)**

Significant

**Fair (C+, C, C-)**

Moderate

**Marginal (D)**

Basic

**Failure (F)**

Not even reaching marginal levels

**Assessment Task**

Coursework

**Criterion**

Achievements in CILOs

**Excellent (A+, A, A-)**

High

**Good (B+, B, B-)**

Significant

**Fair (C+, C, C-)**

Moderate

**Marginal (D)**

Basic

**Failure (F)**

Not even reaching marginal levels

## Part III Other Information

### Keyword Syllabus

#### Introduction to Graph Theory (Revision and Extension)

Graphs, incidence and adjacency matrices, subgraphs, vertex degrees, path and connection, cycles, trees, spanning trees, Prim' s and Dijkstra' s algorithms.

Informal Introduction to the following Time/Computational Complexity concepts:

P, NP, NP Complete, NP Hard, and the P versus NP Problem.

#### Introduction to Dynamic Programming

Recursion, Bellman principle of optimality, Bellman equation, applications such as shortest path and knapsack problems.

#### Least Squares

Introduction to the least squares problem, and solution methods and applications to data fitting.

#### Introduction to Linear Programming (LP), Integer Linear Programming (ILP) and Network Flows

LP and ILP formulations, feasible region, duality illustration, solving simple LP/ILP problems, using Excel solver software package, applications such as resource allocation and network flows.

#### Introduction to Convex Optimization

Convex sets, convex functions, operations that preserve convexity, using computer software to solve convex optimization problems that include applications to networking and to data fitting using least squares.

### Reading List

#### Compulsory Readings

Title	
1	Nil

#### Additional Readings

Title	
1	S. Boyd and L. Vandenberghe, Introduction to Applied Linear Algebra – Vectors, Matrices, and Least Squares, <a href="https://web.stanford.edu/~boyd/vmls/">https://web.stanford.edu/~boyd/vmls/</a>
2	S. Boyd and L. Vandenberghe, Convex Optimization, Cambridge University Press, 2004.
3	D. Bertsimas and J. Tsitsiklis, Introduction to Linear Optimization, Athena Scientific, 1997.
