

# MSE3109: KINETICS AND PHASE TRANSFORMATIONS

---

## Effective Term

Semester B 2023/24

## Part I Course Overview

### Course Title

Kinetics and Phase Transformations

### Subject Code

MSE - Materials Science and Engineering

### Course Number

3109

### Academic Unit

Materials Science and Engineering (MSE)

### College/School

College of Engineering (EG)

### Course Duration

One Semester

### Credit Units

3

### Level

B1, B2, B3, B4 - Bachelor's Degree

### Medium of Instruction

English

### Medium of Assessment

English

### Prerequisites

MSE3190 Thermodynamics of Materials

### Precursors

MSE2102 Introduction to Materials Engineering

### Equivalent Courses

MSE3195 Kinetics and Phase Transformations

### Exclusive Courses

Nil

## Part II Course Details

### Abstract

The course aims at covering the basic principles and processes pertinent to the kinetic aspects of structural changes in engineering materials. The development of microstructures, and hence the properties, in materials as a result of thermo-mechanical treatments will be highlighted. Upon successful completion of the course, students are expected to be equipped with scientific and engineering knowledge to perform qualitative and quantitative analyses of transformation kinetics of simple structural changes. They will also be able to design and apply simple thermo-mechanical treatment routes to conventional engineering alloys to achieve desirable properties.

### Course Intended Learning Outcomes (CILOs)

CILOs	Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1 Understand the thermodynamics of solid solutions and construct binary phase diagrams.		x	x	
2 Analyze quantitatively the diffusion processes in solids and the migration of interfaces.		x	x	
3 Describe the nucleation and growth processes of phase transformation as well as spinodal decomposition.			x	x
4 Analyze quantitatively phase transformation kinetics using the Johnson-Mehl Equation.		x		
5 Relate the nucleation and growth processes to the heat treatments of steel and aluminum alloys.		x	x	x

#### A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

#### A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

#### A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

### Teaching and Learning Activities (TLAs)

TLAs	Brief Description	CILO No.	Hours/week (if applicable)
1	Large Class Activities	1, 2, 3, 4, 5	2 hrs 50 min/week
2	Lab Work	3, 4	3 hrs/week

### Assessment Tasks / Activities (ATs)

ATs	CILO No.	Weighting (%)	Remarks (e.g. Parameter for GenAI use)
1	Mid-term test	1, 2, 4, 5	30
2	Lab reports	3, 4	10

### Continuous Assessment (%)

**Examination (%)**

60

**Examination Duration (Hours)**

2

**Additional Information for ATs**

For a student to pass the course, at least 30% of the maximum mark for the examination must be obtained.

**Assessment Rubrics (AR)**

**Assessment Task**

1. Examination

**Criterion**

Ability to describe and explain the scientific principles and to solve physics and engineering problems

**Excellent (A+, A, A-)**

High

**Good (B+, B, B-)**

Significant

**Fair (C+, C, C-)**

Moderate

**Marginal (D)**

Basic

**Failure (F)**

Not even reaching marginal levels

---

**Assessment Task**

2. Lab report

**Criterion**

Ability to explain the methodology and to analyse the data

**Excellent (A+, A, A-)**

High

**Good (B+, B, B-)**

Significant

**Fair (C+, C, C-)**

Moderate

**Marginal (D)**

Basic

**Failure (F)**

Not even reaching marginal levels

---

### Assessment Task

#### 3. Mid-term test

##### Criterion

Ability to explain scientific principles and to solve related problems

##### Excellent (A+, A, A-)

High

##### Good (B+, B, B-)

Significant

##### Fair (C+, C, C-)

Moderate

##### Marginal (D)

Basic

##### Failure (F)

Not even reaching marginal levels

---

### Assessment Task

#### 4. Assignment

##### Criterion

Ability to sum up, to assess, and to comment on the work of their peers

##### Excellent (A+, A, A-)

High

##### Good (B+, B, B-)

Significant

##### Fair (C+, C, C-)

Moderate

##### Marginal (D)

Basic

##### Failure (F)

Not even reaching marginal levels

---

## Part III Other Information

### Keyword Syllabus

- Thermodynamics of Phase Diagrams (4 hours)
  - Gibbs free energy of solid solutions and its relationship with binary phase diagrams
- Surface/interface properties and phenomena (2 hours)
  - Surface energy of solids, grain boundaries, interphase interfaces, impurity segregation at interface.
- Diffusion in solids (4 hours)
  - Fick's laws, interdiffusion, high diffusivity paths.
- Nucleation and growth of phase transformation (4 hours)

- Nucleation and growth. Gibbs-Thompson effect. Precipitation coarsening.
- Spinodal decomposition (1 hours)
  - Miscibility gap and spinodal curve, phase separation kinetics, microstructure resulting from spinodal decomposition.
- Transformation kinetics (1 hours)
  - Arrhenius equation, Johnson-Mehl equation.
- Heat-treatment of carbon steel (5 hours)
  - Fe-C system, eutectoid transformation, bainitic transformation, martensitic transformation, hardening and tempering.
- Precipitation hardening of aluminum alloys (5 hours)
  - GP-zones, Formation of intermediate phases, Oswald ripening.

### Reading List

#### Compulsory Readings

Title	
1	“Phase Transformations in Metals and Alloys” , D A Porter and K E Easterling, 2nd ed., Chapman and Hall, 1992

#### Additional Readings

Title	
1	“Physical Metallurgy Principles” , R E Reed-Hill, R Abbaschian, 3rd ed., PWS-Kent, 1992.
2	“Stability of Microstructure in Metallic Systems” , J W Martin, R D Doherty and B Cantor, 2nd ed., Cambridge University Press, 1997.
